

Dear Parents,

There is evidence that the effects of prolonged or overexposure to the sun may cause premature skin aging, skin wrinkling and skin cancer. In order to protect your child, Our Health Consultant recommends using a sunscreen lotion on his skin.

Sunscreen is considered an over-the-counter medication. The American Academy of Pediatrics recommends a mild, lotion type, SPF 30, PABA free sunscreen be used liberally whenever the child will be exposed to the sun.

We will be happy to provide this service.

Each parent is asked to sign the form below when starting at First Nazarene Preschool and we will keep it on file for the length of the enrollment. Then please bring us the brand you wish us to use with the child's name written on it. The teacher will keep it in the classroom and use it on your child only.

.....

#### PERMISSION TO USE SUNSCREEN LOTION

We recommend that all children have an application of sunscreen lotion prior to going outdoors on warm days.
